

# Beverage Fountain

Step (1) Screw the top accessory (Floral Top) onto the white main rod in the stabilizer bowl at the top of the fountain.

Step (2) Once the fountain is assembled, place it on a sturdy level surface and pour a minimum of six quarts for a 3 gallon, ten quarts for a 5 gallon, of pre-chilled beverage into the lower reservoir.

Step (3) Plug the fountain into an outlet (lights will come on automatically)

Step (4) Turn the control switch to "ON" and watch the Beverage flow.

**Important Note: NEVER RUN FOUNTAIN DRY OR IMMERSE THE BASE IN WATER!!! Do not use any liquid with pulp**

## Trouble Shooting

Fountain does not circulate any beverage:

Check to make sure the intake holes at the bottom of the motor cover are at the bottom of the bowl. Fountain will typically require up to a minute for the beverage to flow properly. Turn the switch "OFF" for ten seconds and repeat until the beverage flows correctly.

Waterfall will not flow correctly:

To adjust, remove the waterfall cover and turn the screw located inside the waterfall man body. Also, to ensure proper flow through all the holes of the waterfall, be sure the fountain is on a sturdy, level surface.

## HELPFUL HINTS:

To chill a beverage, use ice in the main bowl, dry ice or acrylic ice cubes. Always, pre-chill the beverage whenever possible to at least 36 degrees Fahrenheit, before adding it to the fountain. When using carbonated beverages, pre-chill to 36 degrees. To avoid dilution, use acrylic ice cubes or frozen fruit pieces, Carbonation will dissipate after 10 to 20 minutes of operation. It is advisable to add smaller quantities of mixtures to the fountain from time to time to maintain carbonation.
